JUNG GU
Full-Stack Developer | Software Engineer

PROFESSIONAL SUMMARY

Full-Stack Developer with 3 years of experience in developing cloud-based logistics software and optimizing system performance for the medical supply chain. Proficient in Python, JavaScript and Azure, with a proven track record of implementing microservices architecture and enhancing delivery tracking accuracy. Committed to leveraging analytical skills and innovative solutions to drive efficiency and integration in software engineering projects.

EMPLOYMENT HISTORY

SOFTWARE ENGINEER   **Feb 2024 - Present**
Global Med Logistics

- Lead development of cloud-based logistics software solutions, implementing microservices architecture and optimizing system performance for medical supply chain
- Design and maintain scalable APIs for medical logistics platform, ensuring seamless integration with third-party systems and real-time tracking
- Spearhead automation initiatives in supply chain management, reducing manual processes and enhancing delivery tracking accuracy
- Conduct performance analysis of distributed systems, optimising database queries and reducing API response latency for supply chain operations

WEBSITE DEVELOPER INTERN   **May 2023 - Dec 2023**
Engaj Media

- Designed and developed a front-end landing page using TypeScript, npm, Figma, and React, fostering trust and confidence among visitors, leading them to request complimentary consultations and audits.
- Optimized website performance through code refactoring and modern development practices, ensuring cross-browser compatibility and mobile responsiveness

FREELANCE SOFTWARE ENGINEER   **Dec 2022 - Mar 2023**
YongMen Law P.C

- Implemented advanced React components and email integration systems for law firm website, enhancing user experience and client communication channels
- Conducted comprehensive website performance analysis using Google Analytics, leading to strategic optimizations that drove 25% increase in traffic

EDUCATION

FULL-STACK SOFTWARE ENGINEERING   **Nov 2022**
AppAcademy

The ability to write well designed, testable, efficient code by using industry-standard software development practices for front and back-end dynamic development

BUSINESS ADMINISTRATION   **Jul 2017**
Georgia State University (GSU)

SKILLS

JavaScript, TypeScript, Python, Azure, PostgreSQL, Automation, Pandas, React, Redux, Node.js, Fast API, SQL, Flask, MongoDB, Git, TTD, Containers, Serverless, VM, Docker, HTML, CSS.
